BUG Report

1)**Functional Testing:**

- Though mistake the spelling of typing mail, it not gives any alert like your mail is incorrect and moves another page where verify the mail through authenticate.
- For more security password should be contain uppercase, lowercase letters, special character and numeric digit.
- In naming section it's not able to take full name only take nick name character limit issue.
- From photo section if any person needs to change his password, he can't do it because from this section user not able to go previous section.
- In Filter, Show me section change the option like Male, All than apply changes than exit the application than again access the app it always shows the female option and shows female members only in the app after change it Male, All option.

2) **UI/UX Testing:**

- Need to show (Don't have account) than sign up.
- In priority page, texts are exceeding the box size. So, need to correct the box size according to the text.

3)**Performance Testing:**

- Performance/responsiveness of application is good not issue for responsiveness, send OTP faster, uploading image is also fast and other functionality performance is quite good.
